ST. FRANCIS' CONVENT SCHOOL KANKHERKHERA

UNICEF

Dear Parents, Students and teachers,

- **Corona virus** is large in size where the cell diameter is 400-500 micro and for this reason ***any Mask prevents its entry***.
- The virus does not settle in the air but is grounded, so it is ***not transmitted by air***.
- Coronavirus when it falls on a metal surface, it will live 12 hours, ***so washing hands with soap*** and water well enough.
- Corona virus when it falls on the fabric remains 9 hours, so ***washing clothes*** or ***being exposed to the sun for two hours*** meets the purpose of killing it.
- The virus lives on the hands for 10 minutes, so putting an ***alcohol sterilizer*** in the pocket meets the purpose of prevention.
- If the virus is exposed to a temperature of 26-27 degree centigrade. It will be killed, as it does not live in hot regions. Also ***drinking hot water and sun exposure*** will do the trick and ***stay away from ice cream and eating cold*** is important.
- ***Gargle with warm and salt water*** kills the tonsils germs and prevents them from leaking in to the lungs.
- Adherence to these instructions fulfills the purpose of preventing viruses.
